Strategy and growth

InsurTech/ Fintech

Design led strategic growth and market fit.

Discovery sessions

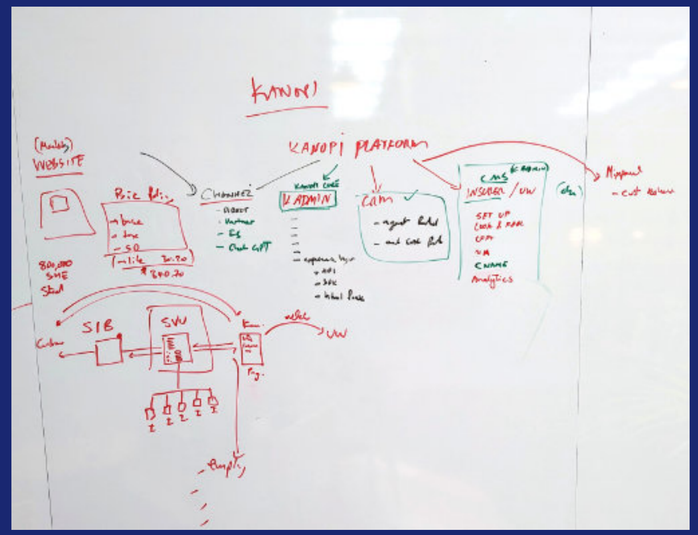

Whiteboard explorations

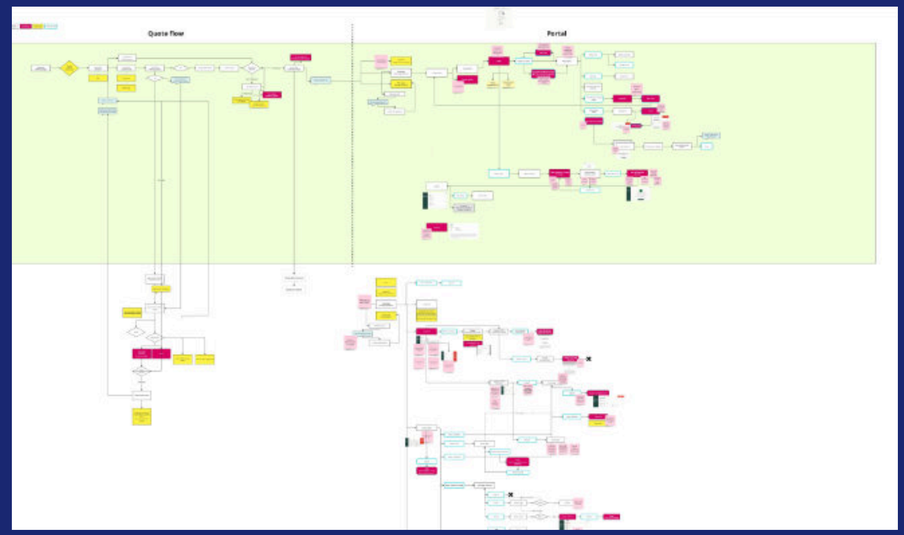

SEM interviews

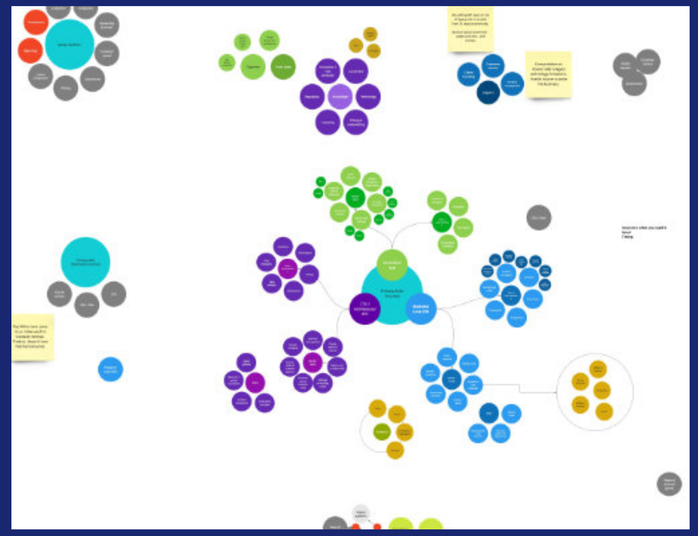

Market trends and technological shifts

Revenue opportunities

“Responsible” scale (should we not can we)

Channel types and growth opportunities

The type of channels partners and the way Kanopi integrates with will determine the risks and growth opportunities.

While it requires a deeper analysis this slide will try to illustrate some hypothesis and assumptions.

ASSUMPTION
The channel co-shares the product/policy with the insurer.
E.g. ‘cover by NRMA’ during quote flows and portal. PDS and docs are owned and branded by the insurer.

	Light channel	Medium channel	Heavy channel
Maturity Market share	**Young** startup <10%. market share	**5+ years in market** 30%>. market share	**10+ years in market** 50%>. market share
Apetite	**Eager** to add offerings and features into their App	**Must** add insurance covers to be able to expand their product expansion.	**Has** to add insurance products to keep with the competition. Growth and revenue opportunities.
Products on offer	1	3	3+
Integration type	Embedded HTML within App (Mobile only)	Dedicated HTML URL App integration (quote flow only)	Dedicated HTML URL Custom app UI (API/ SDK)

Complex systems

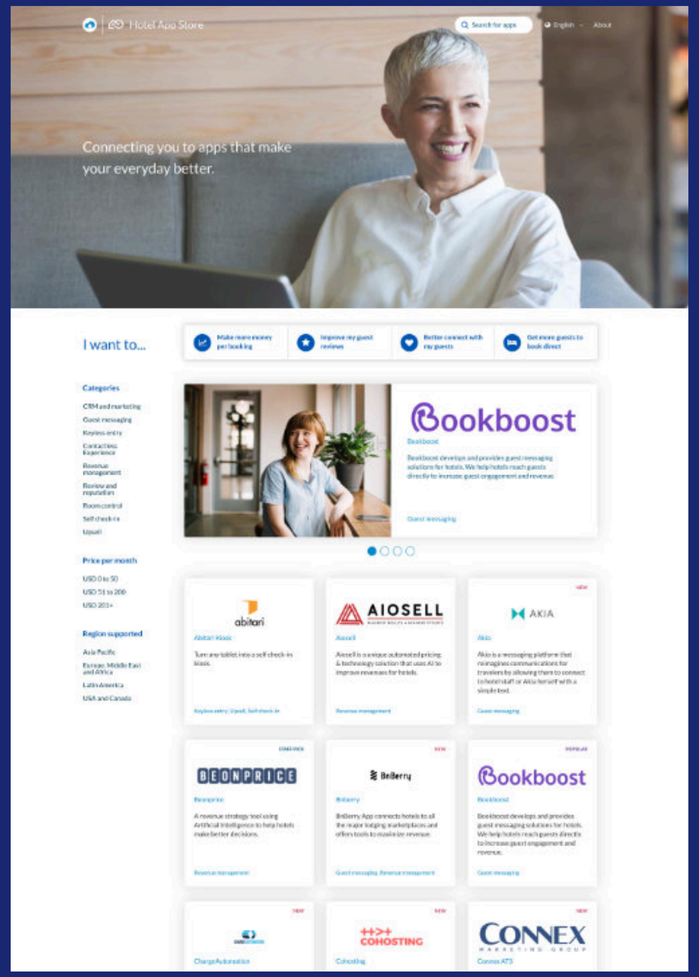

SiteMinder - Hotel App Store

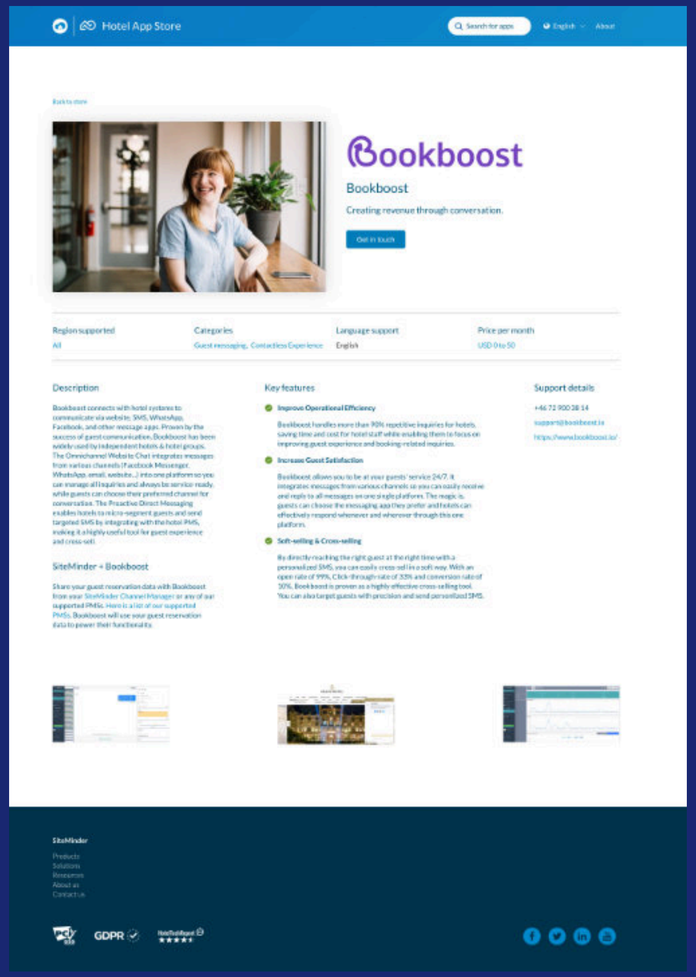

SiteMinder's Hotel App Store is both a platform for app vendors to sell their solutions directly to SiteMinder's customers and for Hotels to find the right and verified solution for their needs. While on the surface it looks like a simple website, the backend logic, sales and on-boarding processes are far more complex.

Key objectives

In this project I lead the entire vision of the app store backend and front-end design and logic which included:

- Setting-up an MVP and future horizons (scaleable foundations)
- Backend and front-end design solutions
- Ecosystem flow
- Monetising flow
- On-boarding and support
- Cross-function user journeys
- Branded website (app store)

Please do not share, upload or print this portfolio without permission. Thank you.

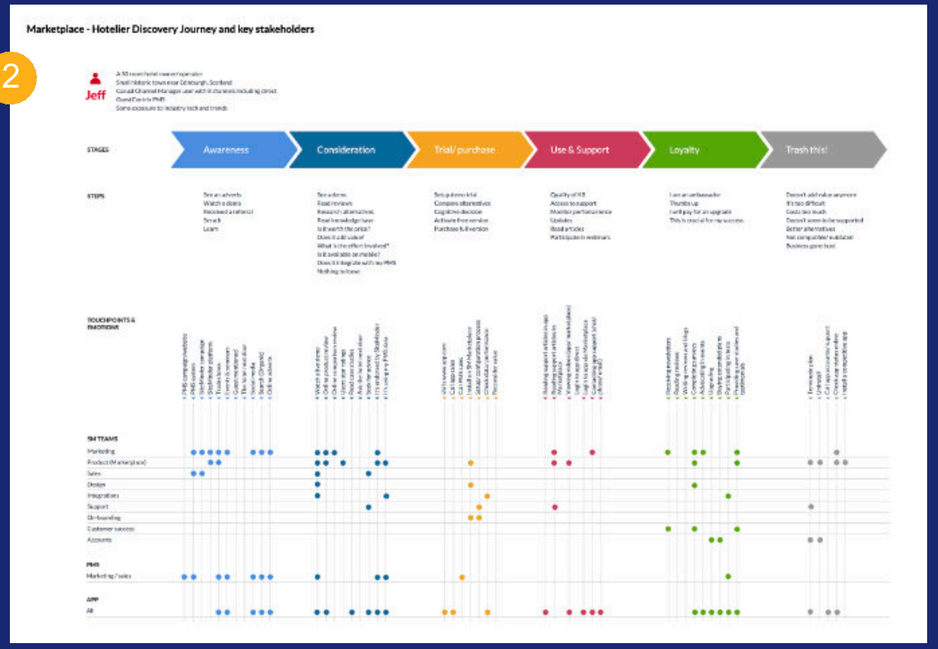

Complex systems

SiteMinder - Hotel App Store

As a primary revenue stream for the company, we had to make sure we can sustain and scale the App Store ecosystem.

Learning how hotels find, select and buy apps, as well as understanding our internal processes was crucial to determine the scope of work, skills, and changes required within the organisation.

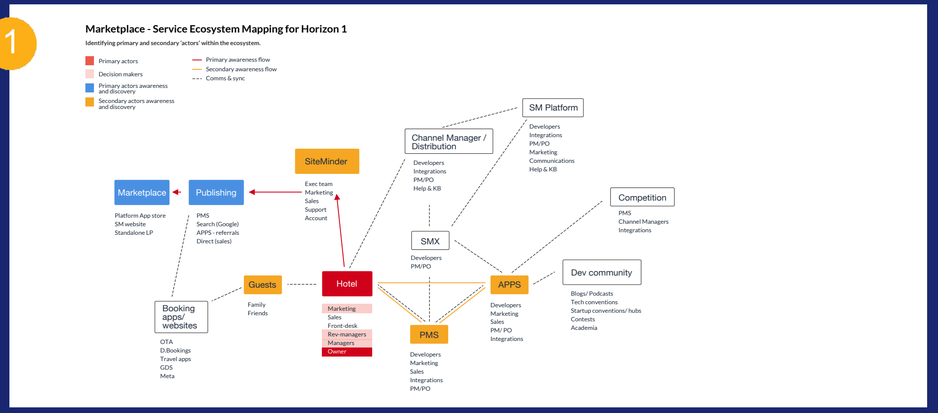

2

3

1

- Ecosystem map - who are we building this for and who needs to be involved.
- Discovery - a complete end-to-end journey and business support/ readiness.
- Support channels and action required for MVP and horizon 1

Please do not share, upload or print this portfolio without permission. Thank you.

Complex systems

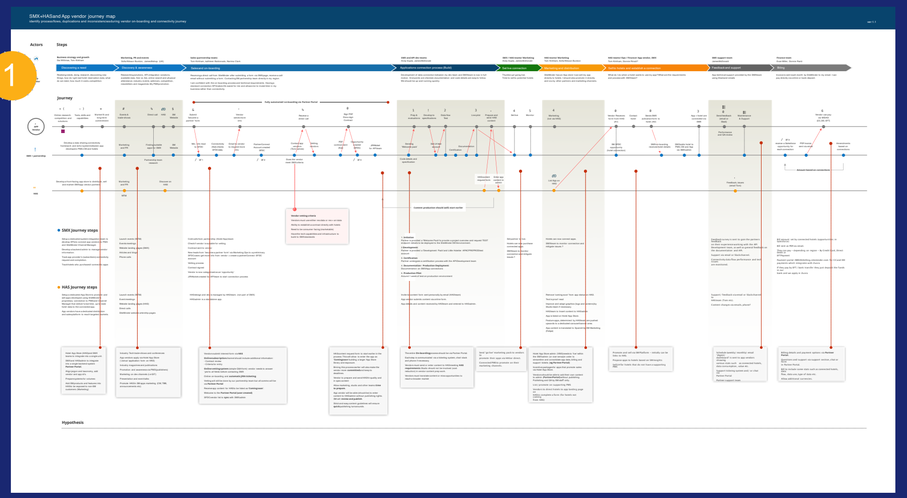

SiteMinder - Hotel App Store

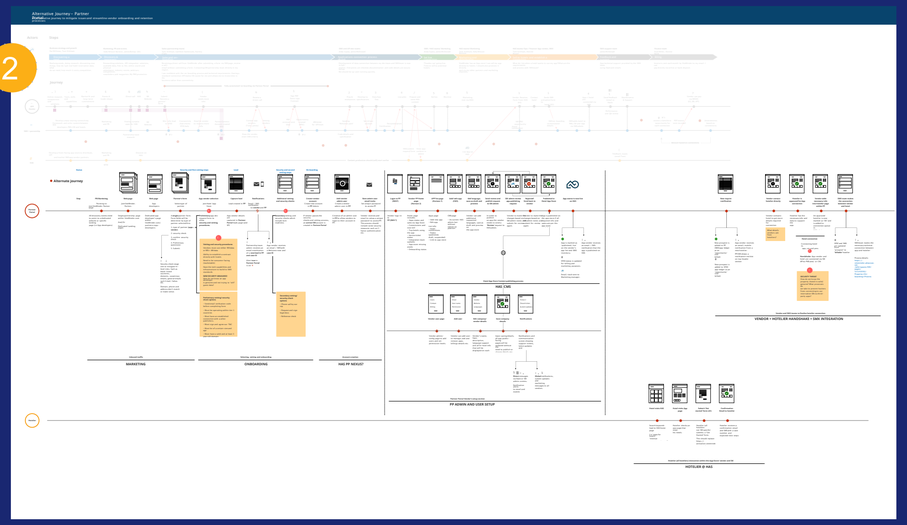

1. What if. A journey map illustrating the various challenges and pain-points of both the hotelier and SiteMinder's staff.

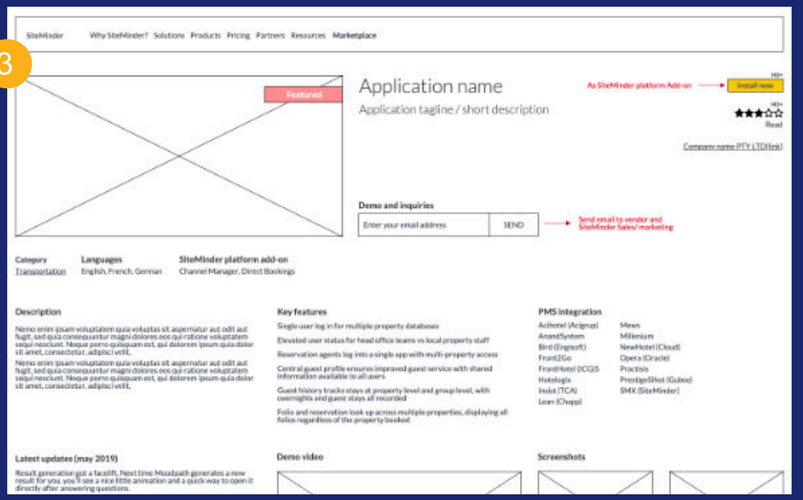

2. A proposed journey map consolidating teams, process and tools.

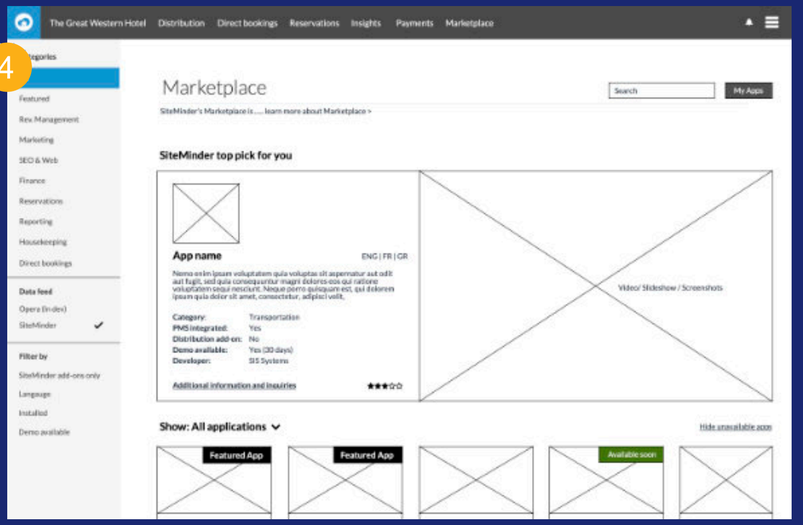

3. An advance sketch of an app store for any hotelier both SiteMinder customer and none customer. This open up lead-generation and up-sales opportunities.

4. Integrating the App Store within the SiteMinder platform.

Please do not share, upload or print this portfolio without permission. Thank you.

Product Design

SiteMinder - Channel Manager

SiteMinder's Channel Manager the company's core application.

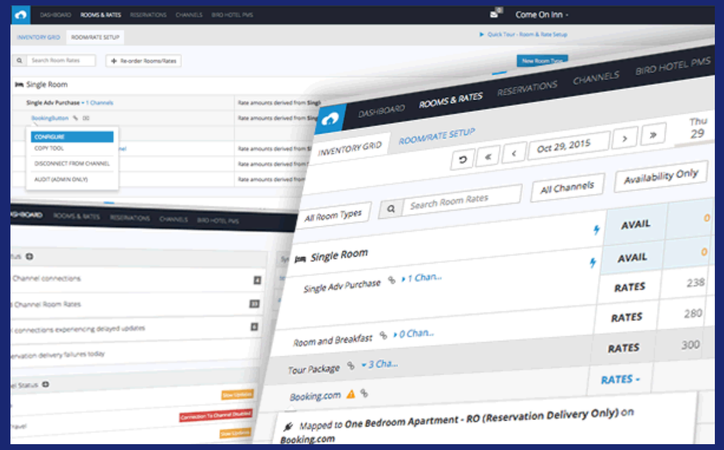

50,000 hotels rely on its distribution powers, accuracy, speed and automation 24/7.

In this project I was the sole designer, working alongside the CTO and the PM, my challenge was to design a scalable and elegant interface to allow hoteliers to easily and effortlessly set their rooms and rates for various distribution channels as well as setting up the UI foundations for our software engineers.

Speed and risk mitigation was the primary UX consideration.

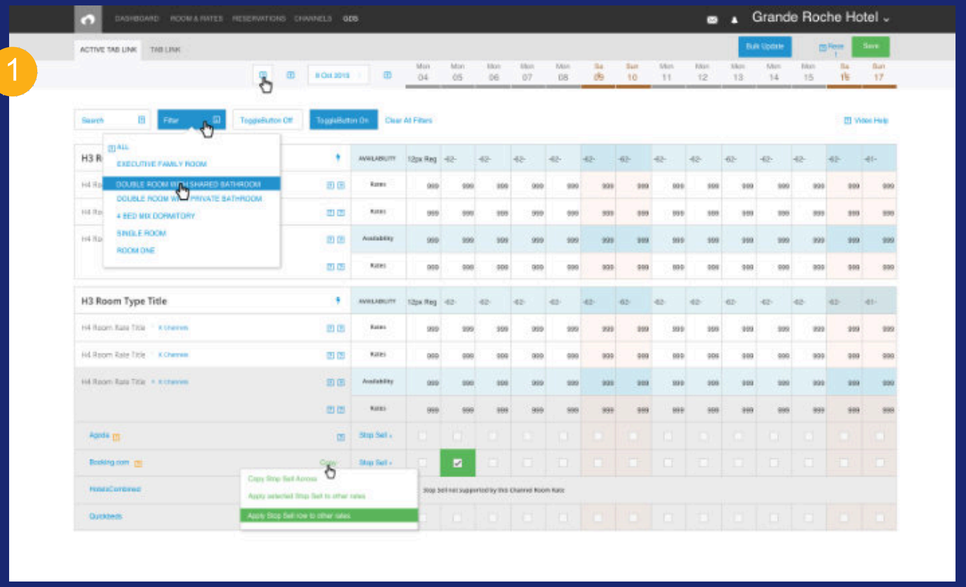

Key design challenges:

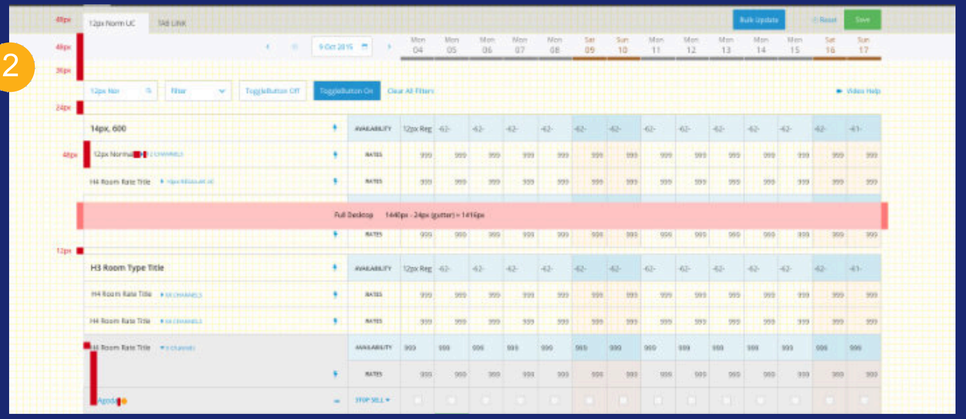

- In-context interactions
- Screens, functions and IA consolidation
- Automation processes
- Bulk processes (set n' forget)
- Find and on-board channels
- Quick glance and quick actions in a 2 weeks and 365 calendar view.

1. Designing for automation, speed and efficiency.

2. Building the UI system foundations for the rest of SiteMinder's products. I used SCSS and simple code hierarchy to support rapid product development as well as on-boarding new developers.

Please do not share, upload or print this portfolio without permission. Thank you.

Product Design

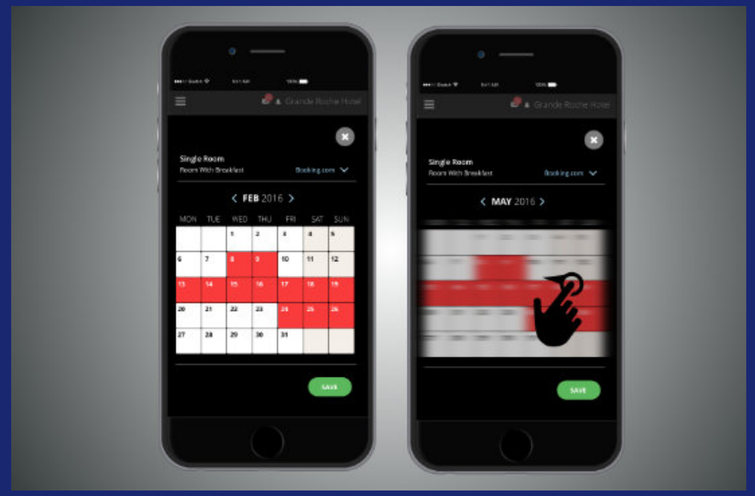

Mobile App - Channel Manager

A native app to support smaller, owner-operator hoteliers where access to desktop and reliable network is limited.

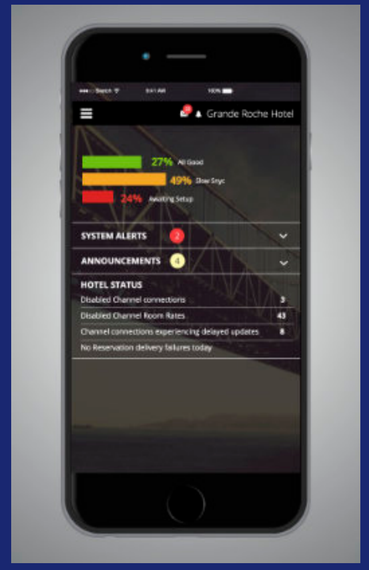

Looking into these situations and customer's needs I designed muck-ups for testing our future tech capabilities as well as customer's thirst for such solutions.

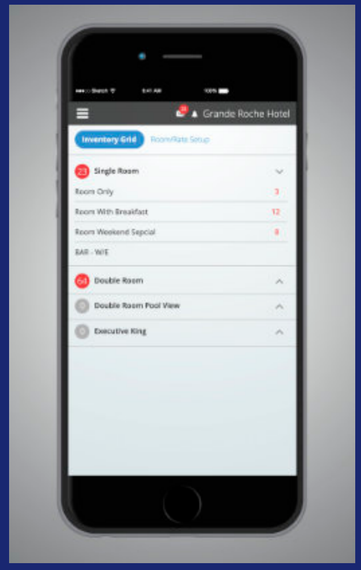

Hypothesis:

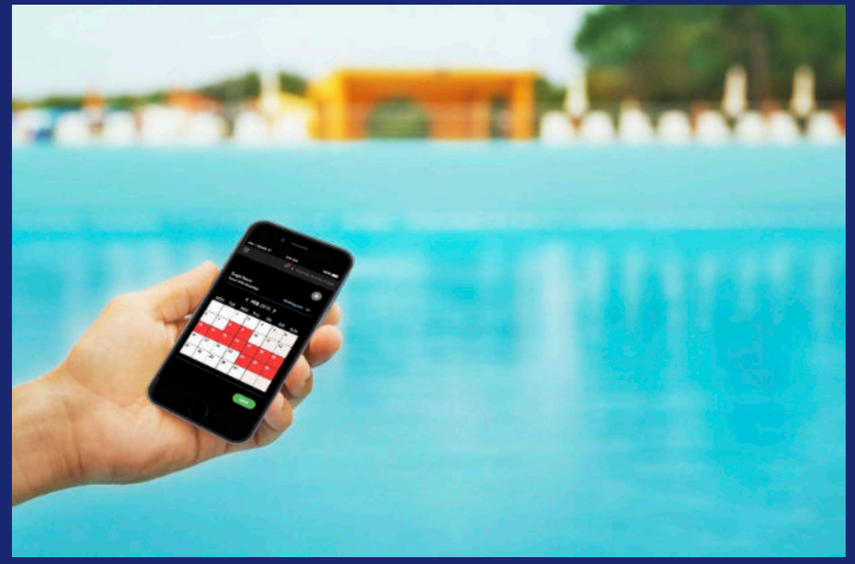

- Do customers want/ need mobile capabilities?
- What features customers will need and use on mobile?
- Can we afford to build and support native apps?

Please do not share, upload or print this portfolio without permission. Thank you.

Product Design

PMS - Little Hotelier

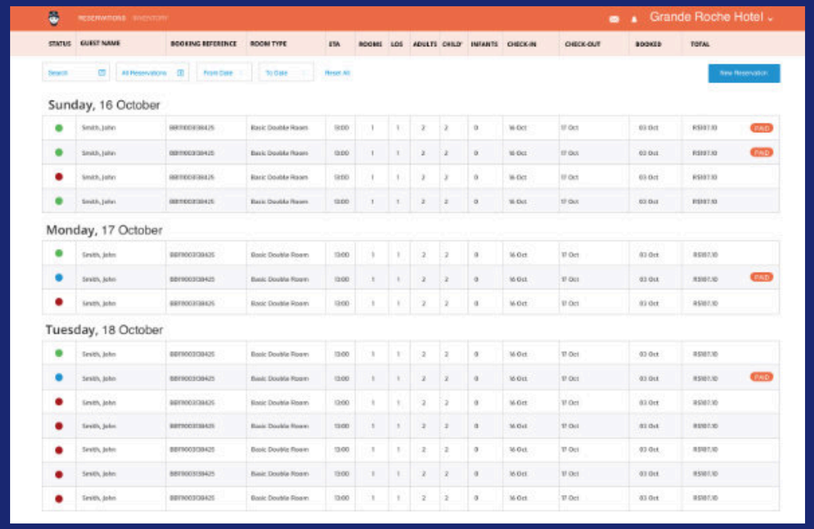

Little Hotelier is a solution for running and managing hotels also known as a PMS (Property Management System).

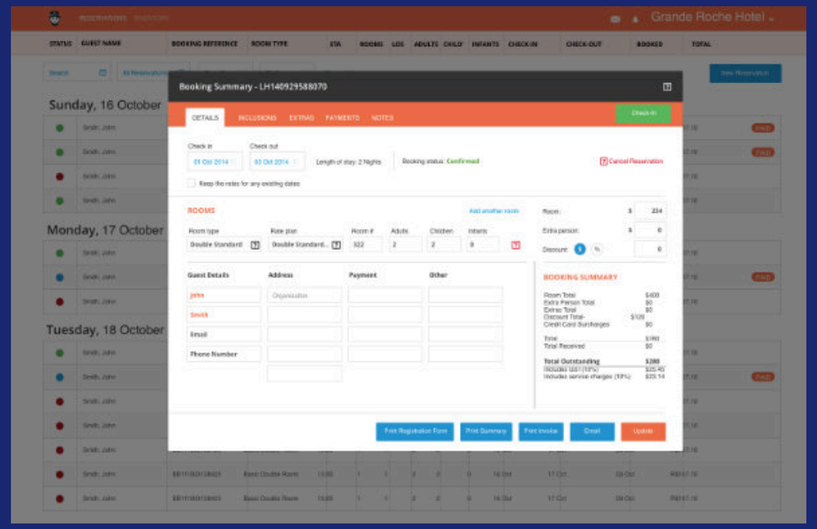

As the lead and only designer in this 'from the ground up' project, I've designed the product to allow for quick check-in/ out process, room allocation and mobility, allowing hoteliers to manage their property from anywhere on the premises.

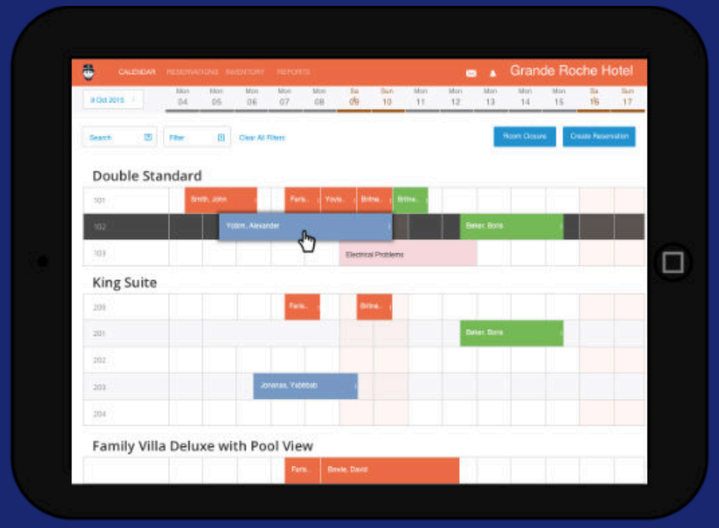

Key deliverables:

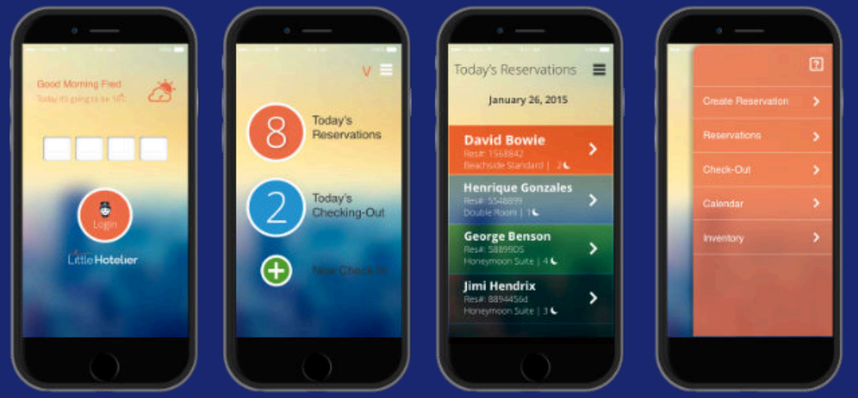

1. Understand customer's pain-point against the business growth and urgency objectives. Time to market was key.
2. Responsive interface (pre mobile first)
3. Quick to operate and understand interface.
4. Front-end dev - Code in SCSS
5. Interview and observe hoteliers using the product in real time.

*Later on I helped develop the brand identity and brand guidelines.

Please do not share, upload or print this portfolio without permission. Thank you.

Product Design

SiteMinder - The Booking Button

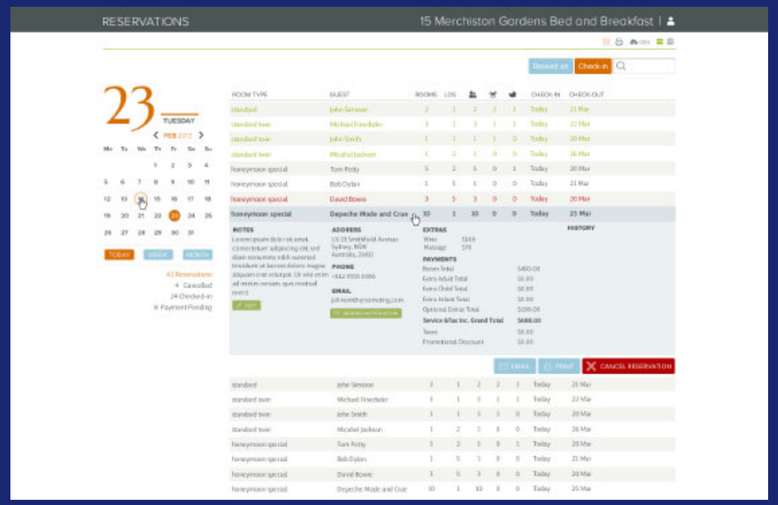

The Booking Button is SiteMinder's direct booking channel engine. It allows hotels to build and configure their own booking website.

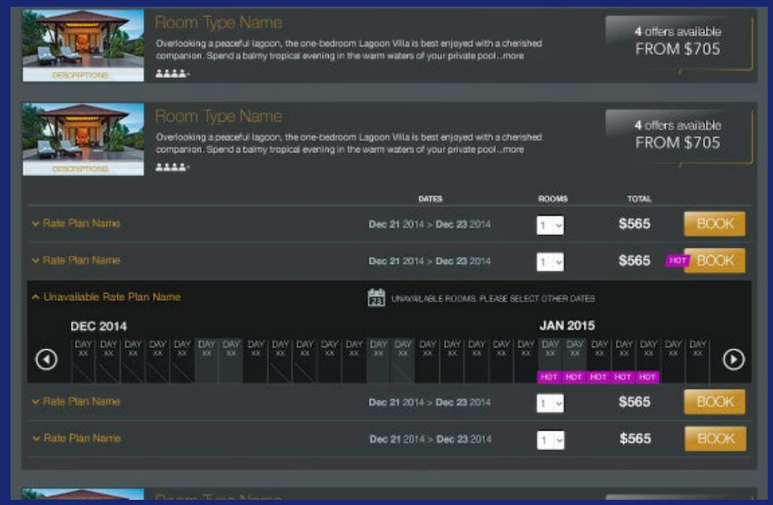

Key deliverables:

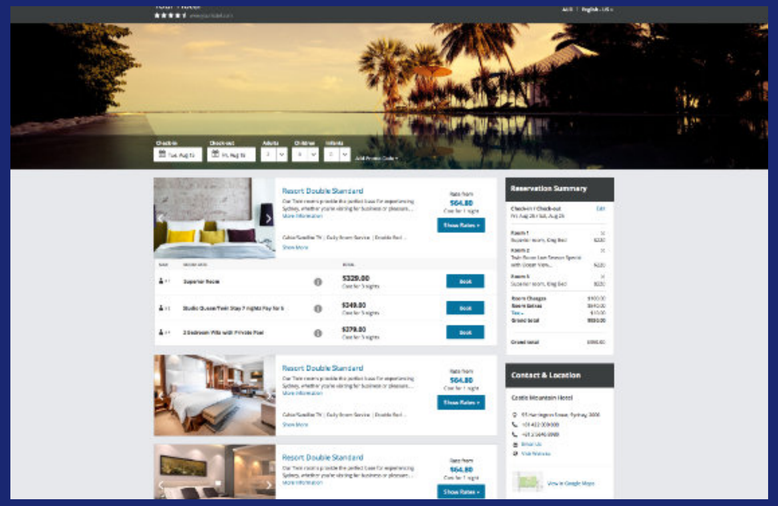

1. Design a new back-end IA and screens.
2. Design a front-facing, responsive white-labeled booking engine website.
3. Integration with other SM solutions.

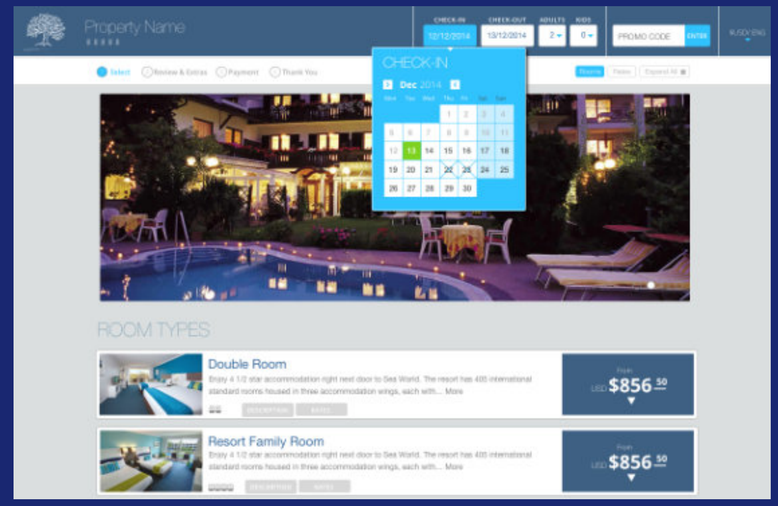

Challenges:

1. How to design a universally acceptable booking website?
2. Creating a frictionless guest experience.
3. Adapting for various languages and currencies.
4. Setup content quality guidelines to reduce bad quality content uploaded by customers.
5. Setup the end-to-end guest experience. Searching, selecting, booking, post-booking activities.

Please do not share, upload or print this portfolio without permission. Thank you.

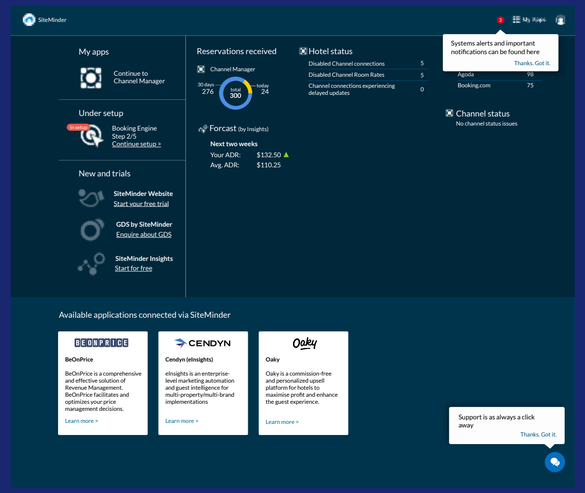

Complex systems

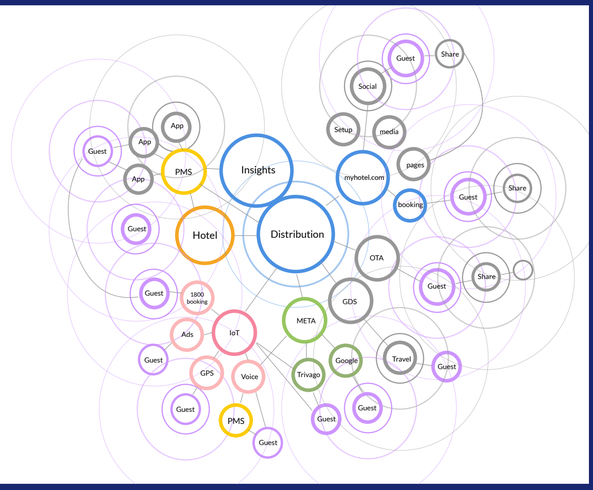

Ecosystem and Market Fit

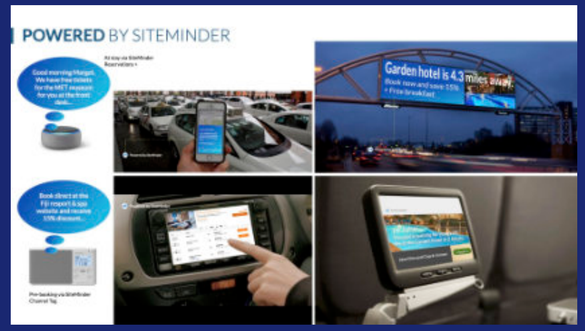

Design strategy.

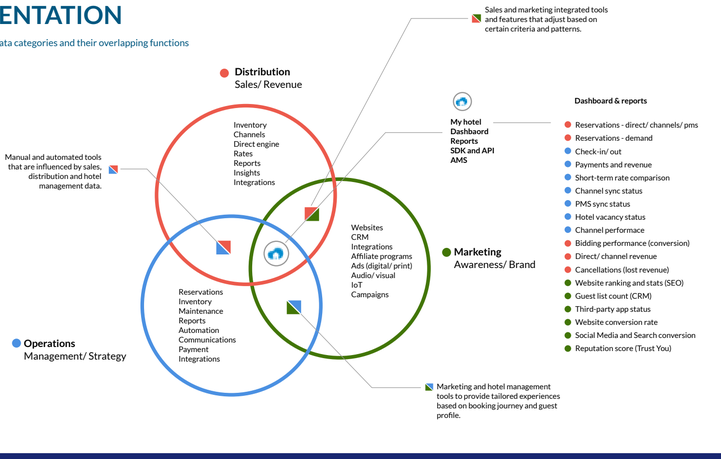

Illustrating a vision using visual aids and presentations accompanied by quick drafts and wireframes.

The goal was to distill SiteMinder's core product offering. What we are known best for and drive the entire platform ecosystem from that core offering.

Please do not share, upload or print this portfolio without permission. Thank you.

Complex systems

Journey Map

With the growth and scale of SiteMinder the need to consolidate our applications into a single platform seemed like the logic step.

The challenges:
1. How to consolidate apps and features without disturbing users?

2. How to prioritise features? What drives what?

3. 'Dead=ends' and opportunities.

4. Information architecture.

5. Consistency, adaptation and intuition.

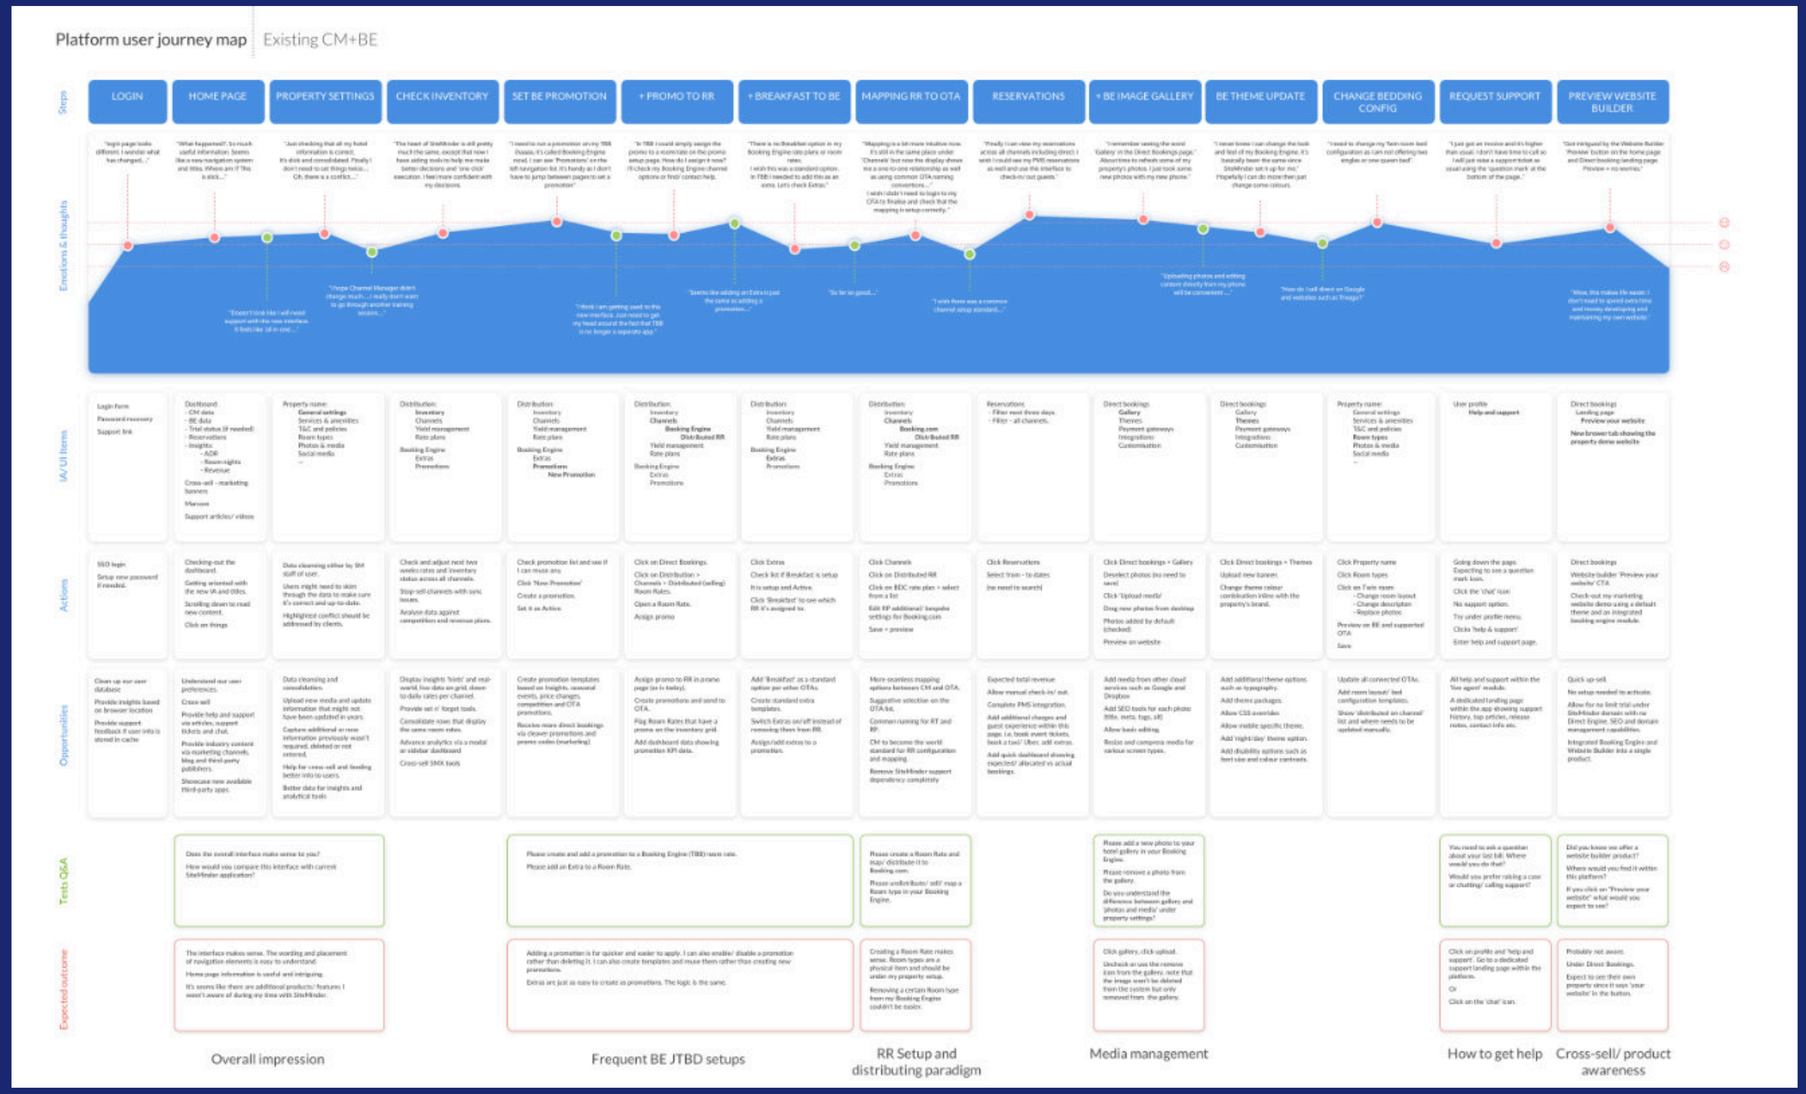

Key deliverables:

1. Build personas and user journeys showcasing a platform viability.

2. Consolidate and design a new IA based on JTBD and cross-references.

3. Facilitate workshops, interviews and tests with customers to validate new IA.

4. Grouping and prioritising functions from our five main products.

Please do not share, upload or print this portfolio without permission. Thank you.

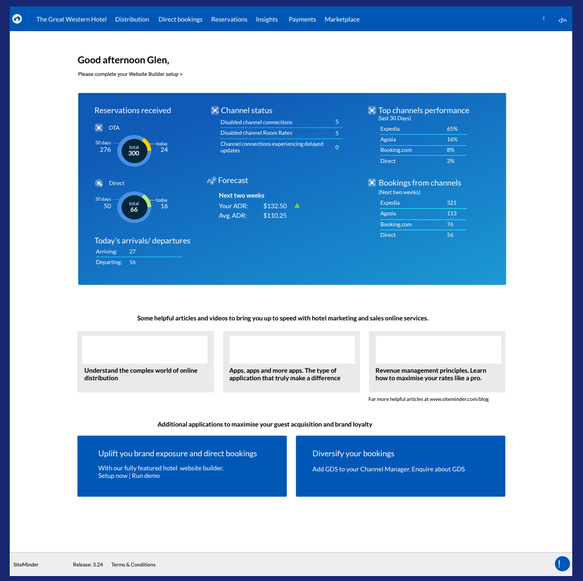

Complex systems

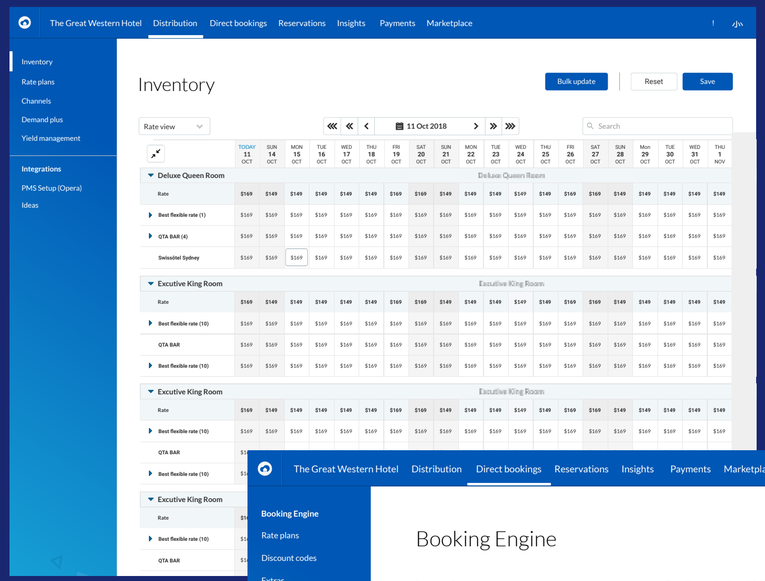

From SASS to PASS

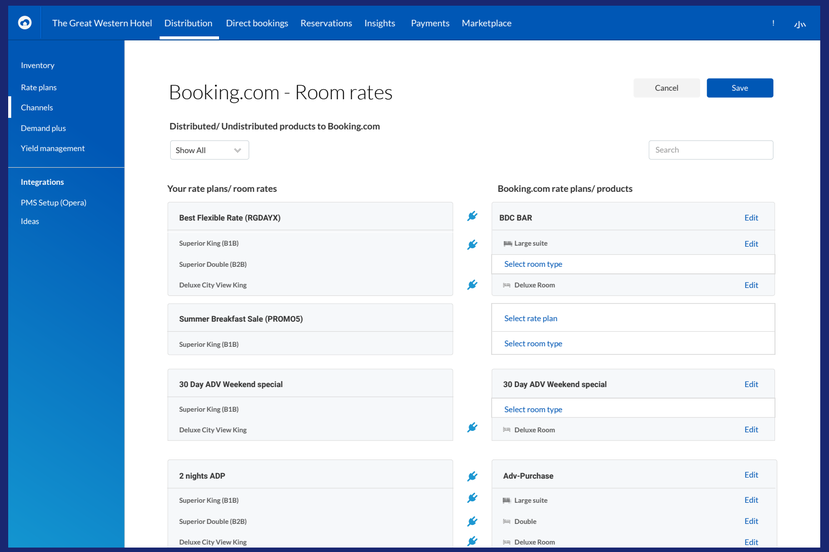

Proposed new Information Architecture and consolidation of features.

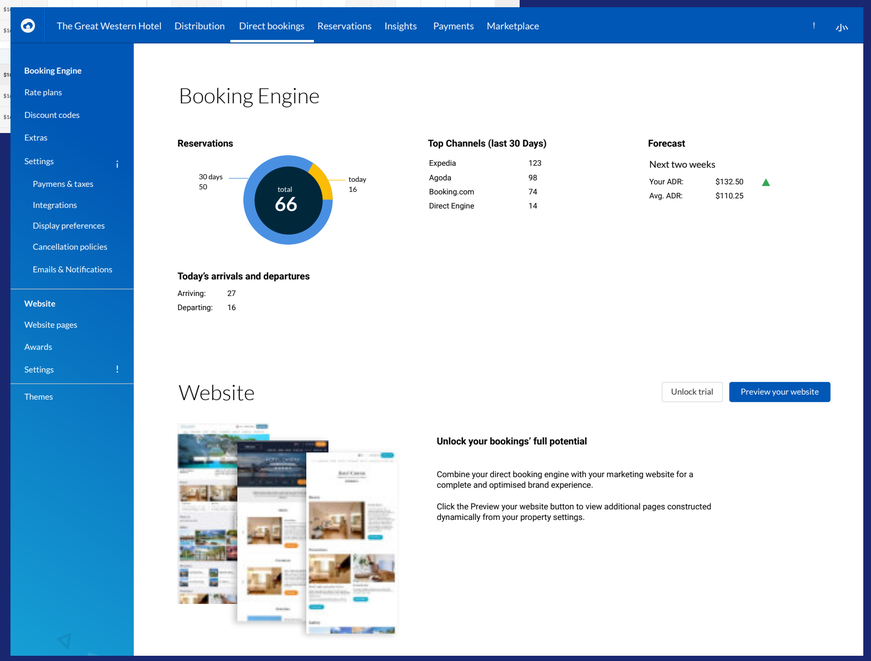

Some screens from a complete interactive prototype for testing and validating purposes.

These are example of our final run using hi-fidelity designs.

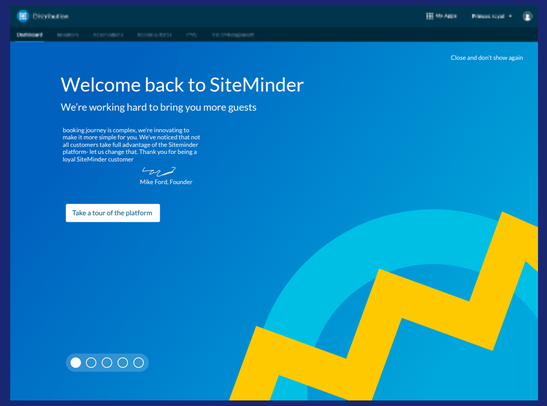

Please do not share, upload or print this portfolio without permission. Thank you.

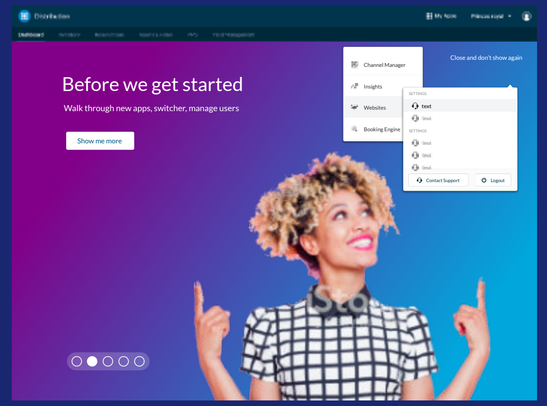

Complex systems

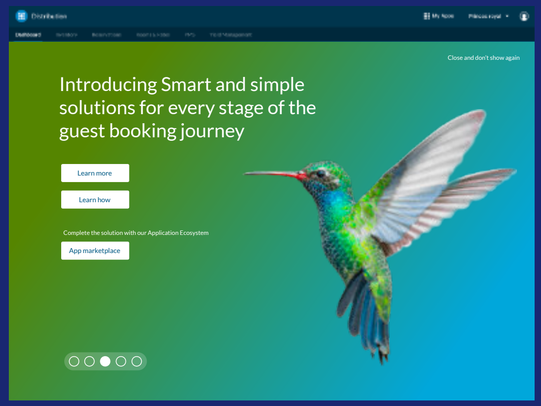

Onboarding branded experience

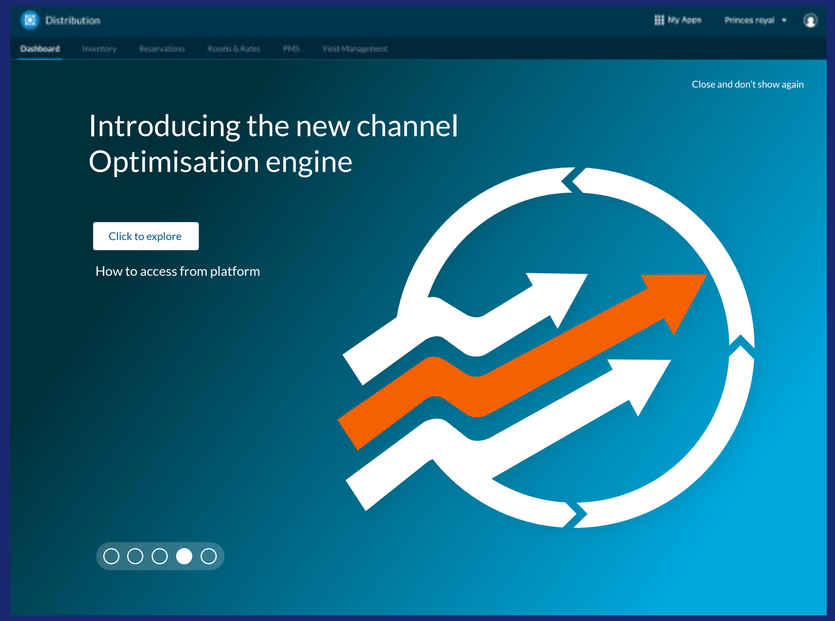

Some visual ‘welcome’ guide concepts combining brand, tone of voice and product interaction to the new platform interface.

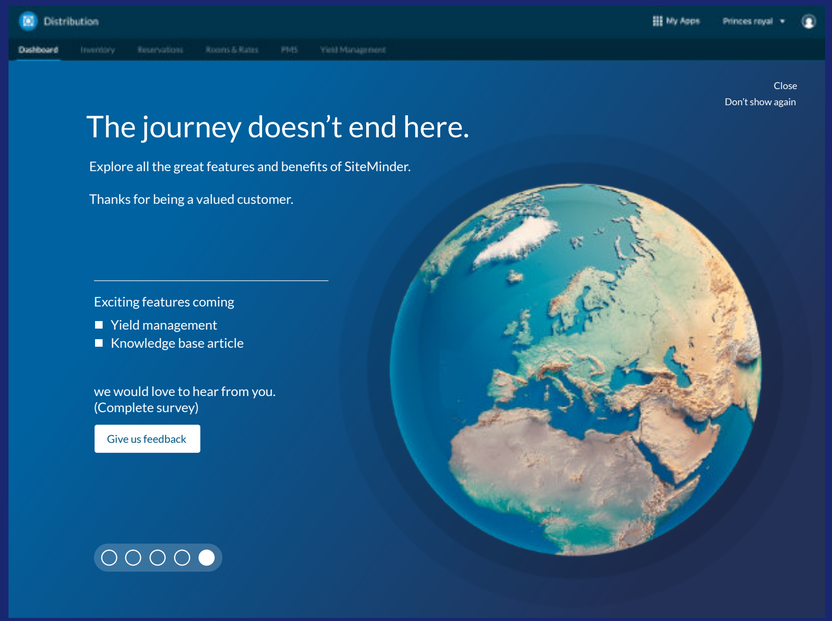

The goal was to create a ‘delightful’ experience using guided elements to ease the transition from fragmented systems to a single platform.

Please do not share, upload or print this portfolio without permission. Thank you.

End to end UX

Desgin auditing

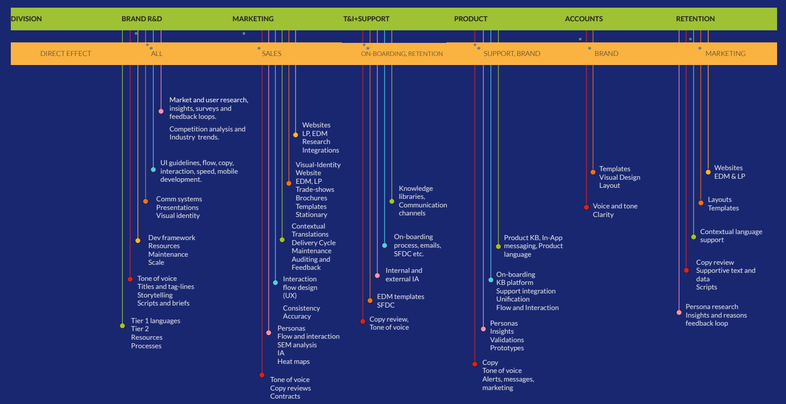

An auditing project to reveal the end-to-end communication and interaction flow and assets.

The result is a comprehensive document showcasing the various visual and verbal experiences our users encounter from brand awareness to billing.

The guide helped the organisation bring the overall user experience one step closer to a consistent visual and verbal experience as well as creating design awareness within the organisation leadership and staff.

Experience Touch Points

App UX · App UI · Graphic Design · Web Development · Language Support · Copy/ Text

Brand Management

Brand Champions

Each team will have a dedicate Brand Champion to keep communication assets under brand guidelines, processes and tools.

Knowledge Consolidation

We must consolidate all our knowledge to a single "source of truth". This knowledge most be managed by a single team who will determine the publishing guidelines, align to a brand voice and tone and manage the publication tool (not tools).

Copy and Storytelling

Copy most be written by a dedicated person within each team or by our KB writers for product interfaces.

All copy should be reviewed and adhere to a single, easy to read and understand Tone of Voice guideline which will be available to all employees via Bamboo.

Our Tone of Voice needs to be incorporated into our induction process and Welcome Guidebook.

Internal Brand

Who we are must start from within. Our internal identity must convey who we are and what we stand for. Together with physical assets such as wall-arts, posters, fixtures and furniture, the brand champions and managers must 'live' the brand and communicate our values daily.

Global Communications

We must communicate our brand globally. This means tighter communication channels published on planned schedules (fortnight, monthly) via a marketing tool or verbally by our regional brand champions.

Consolidating Tools

We must consolidate our communication tools to bare minimum. There is no perfect tool so whatever works best for us stays and the rest can be sunset.

Consolidating Processes

We must have a single source of truth for processes ,tools and guidelines. This must be determine by head of teams and brand champions. We have too many tools and processes overlapping each other and we allow employees to choose what works FOR THEM, not WHAT WORKS BEST THE COMPANY. This effects our brand and culture.

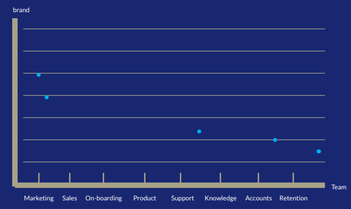

Back to Basics

We tend to think that by adopting digital tools and complex processes we will be better-off but in reality we can use what works for us best by trial and error, feedback and education.

Sometimes a pen and paper conveys a complex message or brief in a few seconds.

A simple drawing explains a complex idea in a moments time.

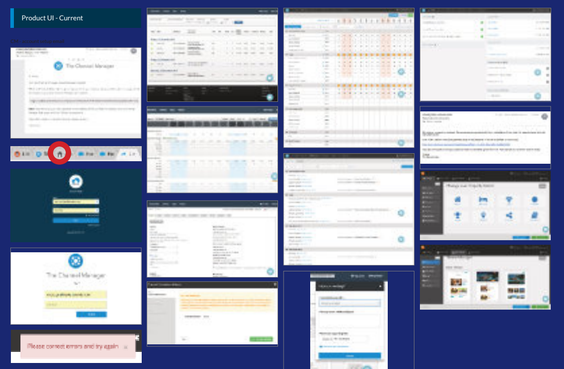

Having less options might have better ROI and overall satisfaction.

User Research

Storytelling

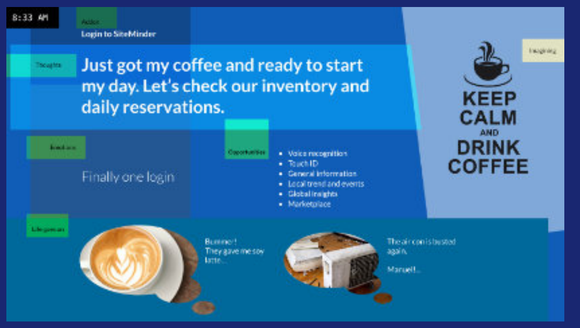

A great way to understand the customer's pain-points as well as finding new product opportunities is to illustrate a journey as a visual story.

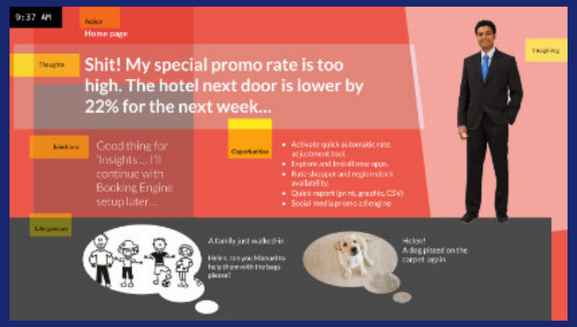

Here is a story of a hotel owner/ operator. What goes on on a typical day, how he manages the hotel and uses his tech stack.

Each slides tells a story, showcases pain points and highlight new opportunities to explore and ideate.

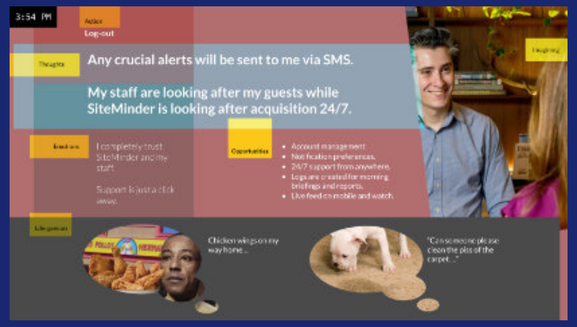

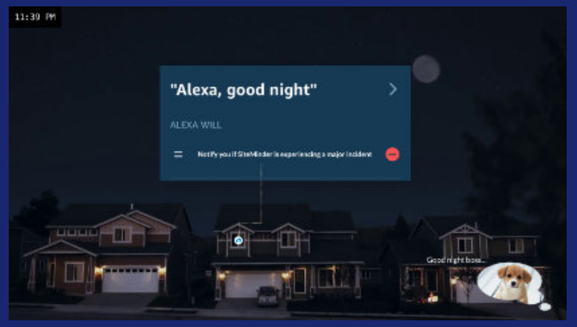

Please do not share, upload or print this portfolio without permission. Thank you.

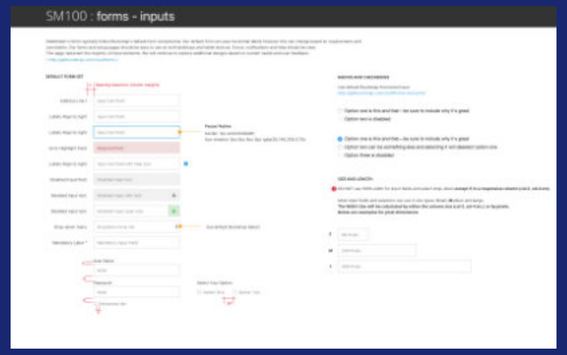

UI Systems and Foundations

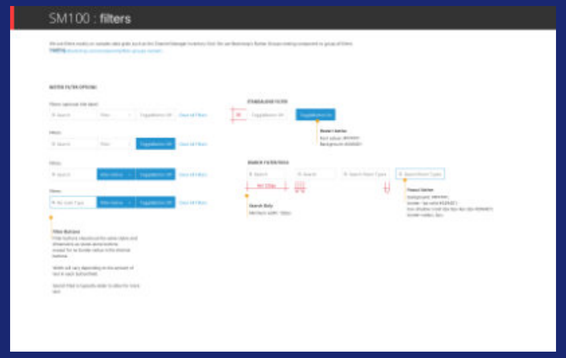

Design systems and UI libraries

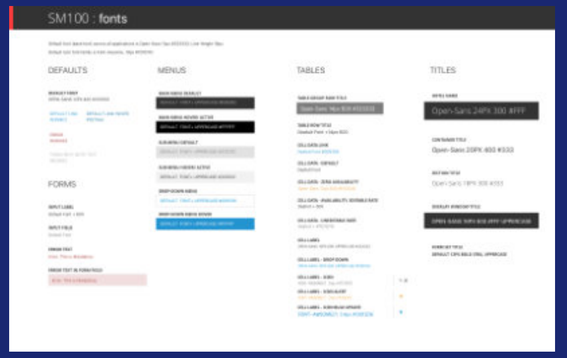

Custom-build UI design library.

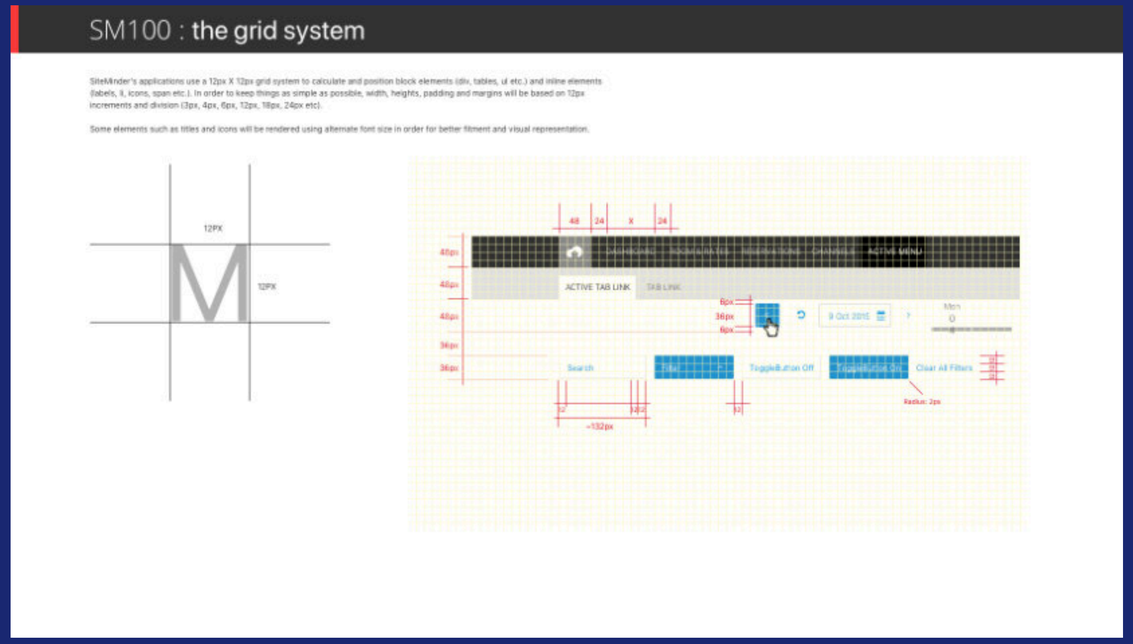

A system that was developed for a quick and efficient handover process and reduce risks and QA times.

Design developed using a grid system and SASS veriables.

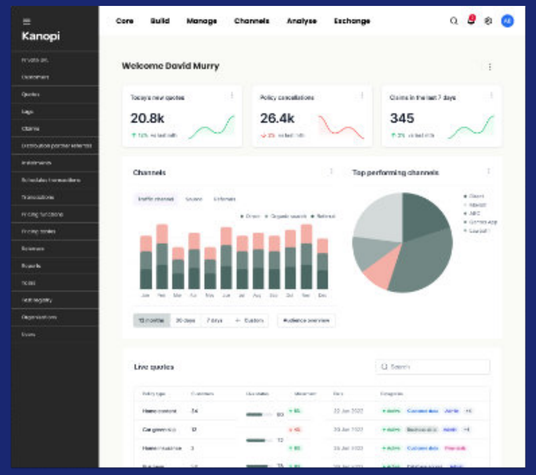

Please do not share, upload or print this portfolio without permission. Thank you.

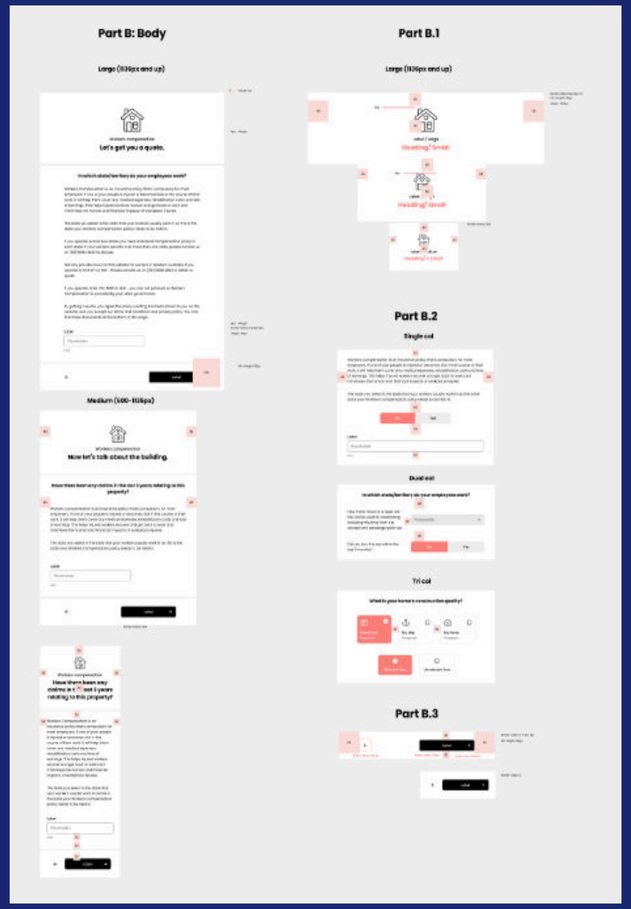

UI Systems and Foundations

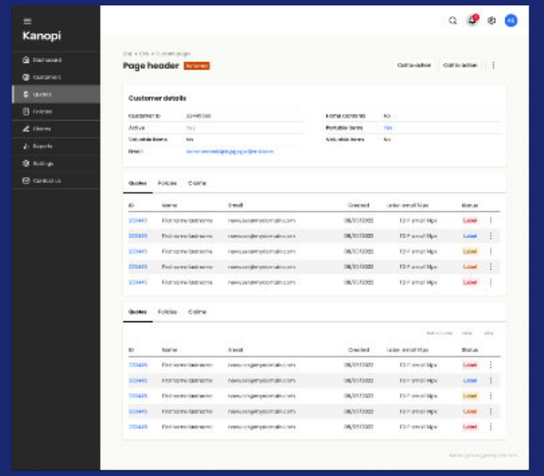

Design systems and UI libraries

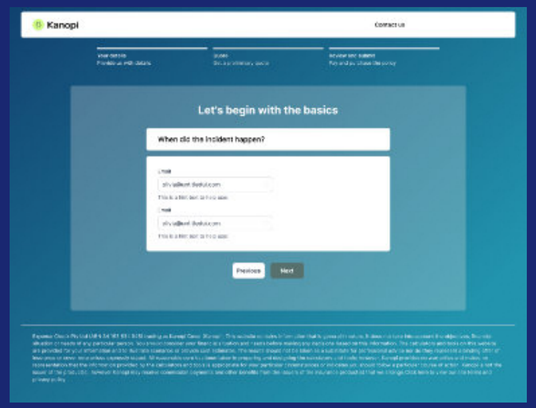

Custom Platform UI library design based on a Base foundation library.

Custom online insurance questioner form flow that can be themed and styled.

Websites

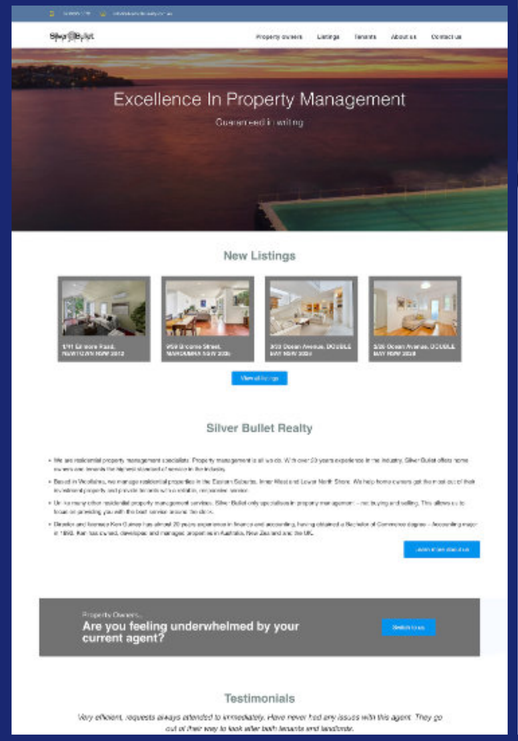

Website design, development and content production

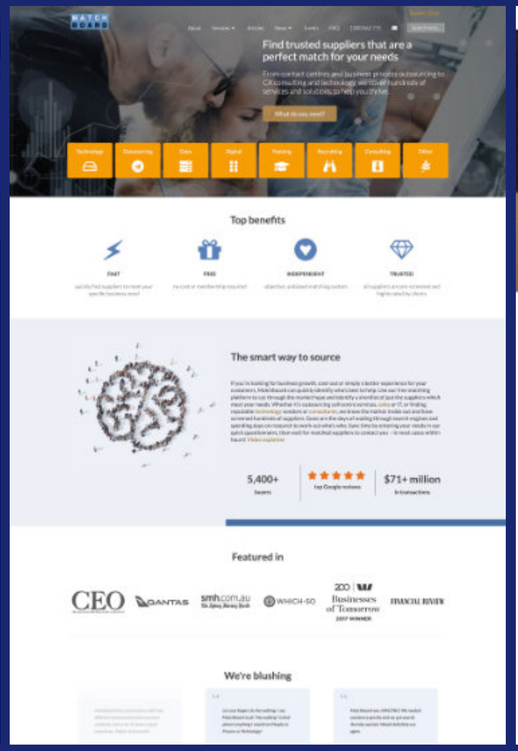

I have been designing and developing websites since HTML 1.

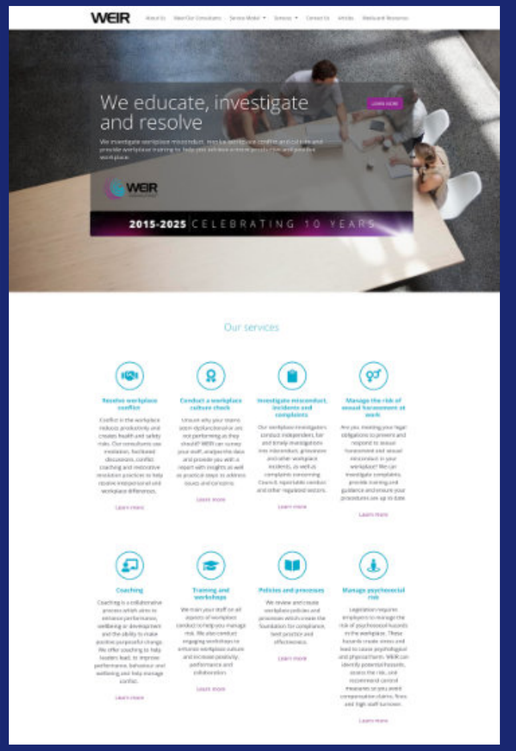

My approach to web design is 'less is more' and in recent years 'mobile first.

As head of design I managed some creative and complex websites focusing not only on design and logic (UX) but also:

SEO
Accessibility
Information and Navigation
Templates and reusable assets
Landing pages
Gated content
Integrations
Analytics
Content production and publishing processes
QA and audits

Please do not share, upload or print this portfolio without permission. Thank you.

Websites

Product Catalogue

Audit and redevelop an old WordPress website into a new commerce catalogue.

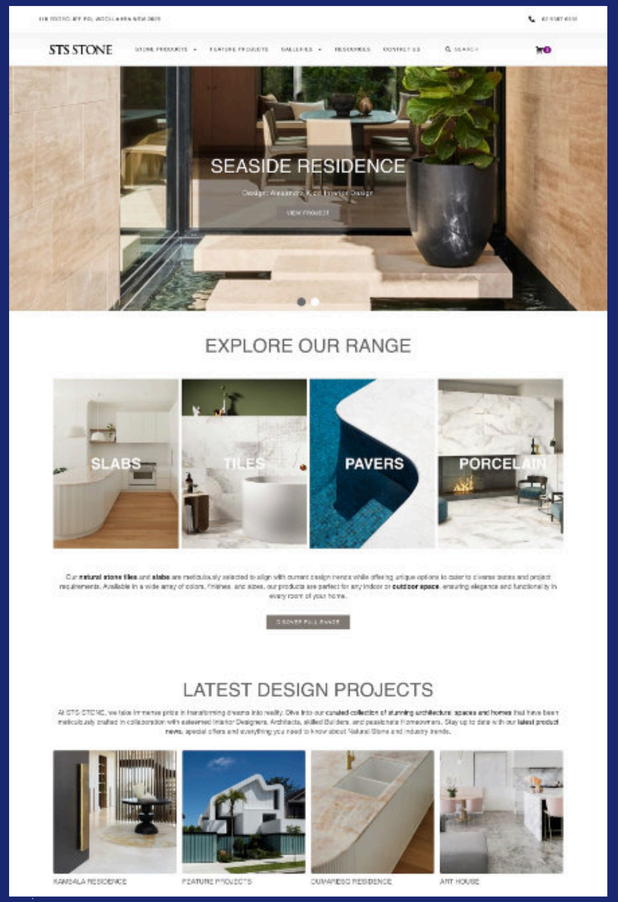

80% Resources reduction

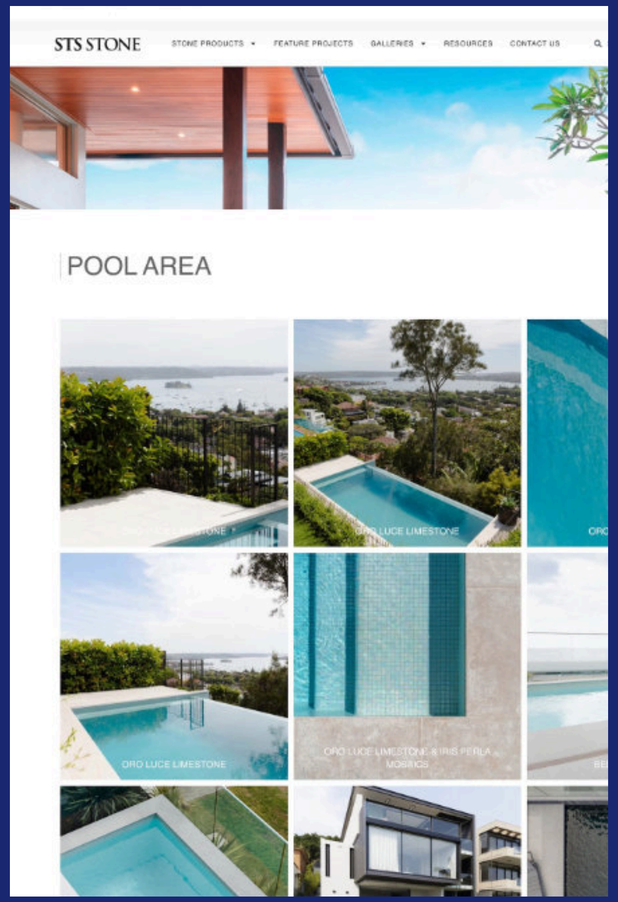

SEO and Accessibility AA guidelines

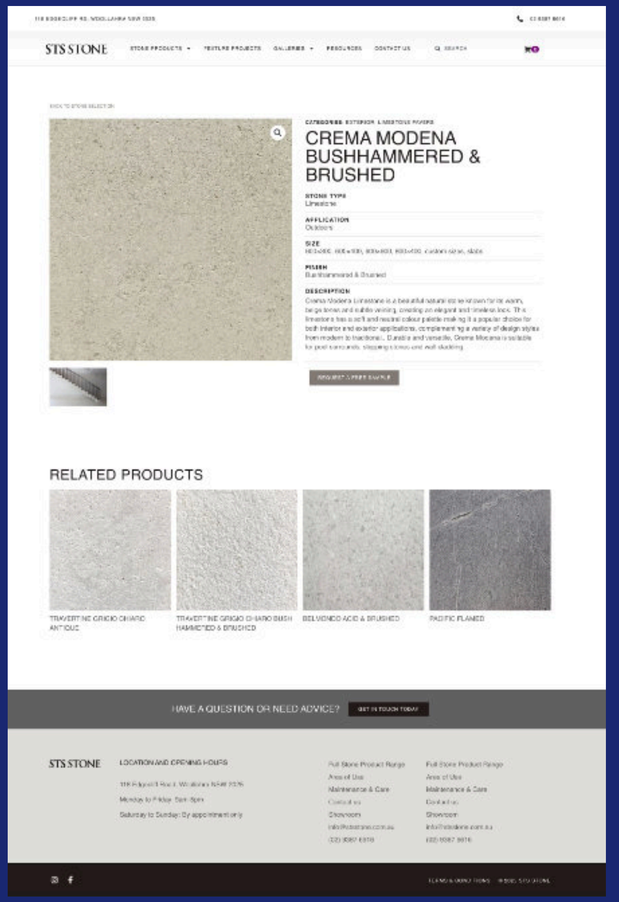

Content optimisation

Ordering process and CRM integration

Download / order samples

The complete UX

Developing an end-to-end experience

SiteMinder.

Building a design culture, team, processes and tools for a complete end-to-end consistent and familiar experiences.

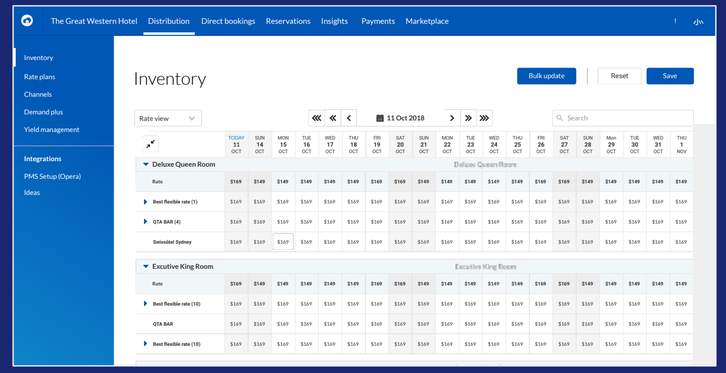

SiteMinder brand strategy and visual identity.

Developed by the in-house studio team.

Visual consistency is important but usability and accessibility ultimately drive product experience and interface design.

Please do not share, upload or print this portfolio without permission. Thank you.

Brand

Developing brand strategy and visual identity

UX is not just product. It's experiences that involve emotions, ergonomics, empathy and sensory items.

As part of my design directing role I developed and directed:

1. Brand strategy
2. Brand identity
3. Tone of voice
4. Brand guidelines
5. Product UI
6. Video guidelines
7. KB and learning
8. QA

Visual identity developed by external agency (www.xpr.co.il) with my direction
